HELLO!

My name is Dominique Seyi, and I'm a creative individual with a never ending passion for learning, and experience in digital and web design alongside front-end development.

My design journey began in 2013 - creating graphics based on my favourite films and shows for my blog, which led to me learning how to design and code websites during my Media degree at De Montfort University. A new found love for web design led to me completing my masters degree in Digital Design, and developing my coding skills in my spare time along the way.

After graduating, I made my way into my current role as Junior Web Designer/Developer at Funky Pigeon. In this fast paced role, I have become responsible for the design of Funky Pigeon's online assets & marketing material, HTML Emails and digital marketing materials. Designing and prototyping new features, updating and designing website and app promotional graphics and maintaining the website are regular parts of my job, which means both my coding and design skills are put to use on a daily basis. When I'm not working, I often spend time self-learning and developing my skills in areas such as UI and UX.

DESIGN/FRONT-END SKILLS

- HTML • CSS • JavaScript • React • UI • UX
